

TECHNICAL DATA SHEET

RIM GOLD PREMIUM - GOLD STANDARD RIM & TYRE PROTECTION

- A premium, next generation, corrosion inhibitor and sealant designed to prolong the life and provide maximum protection for tyres, wheels and rims in all heavy equipment tyres - Mining, Earth moving, Agriculture etc.
- **UNIQUE HIGHLY CONCENTRATED SOLUTION**, alleviates the logistic complexities and costs of transportation.
- **Rim Gold Premium - displays Hammersley's new and markedly different technology for the care of industrial wheel rims.**
- **Hammersley's novel technology provides a more sophisticated and far more effective protection for both tyres and rims.**

FEATURES:

- Monumental leap forward in providing a concentrated product – **20lts makes up 1000lt of premium protectant**
- Protects wheels and rims from rust and corrosion
- Makes tyre removal from rims easier.
- Superior rim sealing
- Keeps tyres cool – prolongs tyre life
- Assists in essential maintenance
- Assists heat transfer under hot conditions
- Will not damage tyre patches
- Environmentally responsible
- Occupationally safe

BENEFITS:

- Radically reduces the cost and inconvenience of transportation.
- Radically reduces the use of plastic IBCs.
- A monomolecular film barrier protects all metal surfaces to prolong rim and tyre life.
- Corrosion free rims allow tyres to be removed quickly.
- Effective low stress sealing reduces or eliminates air loss through poor tyre seals.
- Cooler temperatures decrease tyre wear, increase tyre performance and increase running life of tyres.
- Highlights rim cracks and tyre damage quickly, allowing repairs to be affected before they become hazardous.
- Reduces operational tyre temperature.
- Has no detrimental effect on tyre patches and will not cause patches to lift or peel.
- Poses no environmental hazard. To dispose, simply dilute with water.
- Non-flammable, non-toxic and safe to use.

APPLICATIONS:

- Rim Gold Premium is a highly concentrate fluid and must be diluted before use.
- It is used as a 2% solution – just 20lts to make up 1000lts of ready to use product.
- A water driven injection system is the easiest method of accurate, automatic dilution – full advice is available on request.
- For manual dilution, half fill a 1000lt IBC with water, add 20lt of RGP and top up to 1000lt mark with water – stir briefly to combine – it's now ready to use
- Use at levels approximating the table below. Historical usage levels and usage patterns should be taken into account.
