

# DUSTAT

## RESIDUAL & CUMULATIVE DUST CONTROL

### ECO- RESPONSIBLE

As experts warn of a serious global water shortage, the need for sustainable water management within the mining industry has become critical. Enter Hammersley's revolutionary residual and cumulative dust control solution- **DUSTAT**.

Dustat is the most effective treatment solution for dust control and for eliminating the serious problems caused by coal particles in our environment. Dustat has an extremely high agglomeration efficiency which binds fine dust particles together, forming heavier, less dust producing aggregates. It's strongly Hygroscopic, which creates a moist microenvironment that maintains a residual effect, and it provides a cumulative effect which, with continual use, progressively assists the compaction of the substrate. Not only that, but it also exhibits high resistance to leaching away with rain or watering.

Dustat is a plant-based concentrate which is a highly effective and natural replacement for other corrosive chloride salts and ineffective wetting agent type formulas. It's environmentally responsible and completely safe to use- Non-toxic, non-pollutant and fully biodegradable. In fact, our customers are reporting that they are reducing their water consumption by a minimum of 25% in the first 2 months and up to 50% over-all! That's pretty amazing.

**So with Dustat on your side, the only thing you have to lose is the DUST!**

Dustat is yet another great product from Hammersley, our Australian owned company. For more information or technical details about this great product please contact our friendly sales team on **02 4928 2955** or email us via [sales@hammersley.com.au](mailto:sales@hammersley.com.au) between 9am - 5pm weekdays.
